## SICO<sup>®</sup> ECOTEC

*NPK fertilisers with DMPP nitrification inhibitor  
for application in horticulture and farmland (agriculture).*

9/2019

### **INTRODUCTION**

SICO ECOTEC fertilisers are nitrogenous mineral fertilisers containing the ammonium stabiliser DMPP. This slows down nitrification and therefore ammonium nitrogen in the fertiliser is "stabilised in the soil". In addition to stabilised ammonium nitrogen, SICO ECOTEC also always contains a proportion nitrate so that it starts to work quickly. This means that the plant can absorb both types of nitrogen simultaneously over a relatively long period and this increases the efficiency of the nitrogen fertiliser once it has been applied SICO ECOTEC fertilisers are available in the form of nitrogen-sulphur fertilisers as complex fertilisers. All SICO ECOTEC products are characterised by the high quality of their grains, which guarantee problem-free storage and precise application.

<b>Typical chemical analysis</b>			
Total nitrogen (N)	26.0 %	12 %	14 %
Ammoniacal Nitrogen (NH <sub>4</sub> -N)	18.5 %	7.2 %	7.9 %
Nitric Nitrogen (NO <sub>3</sub> -N)	7.5 %	4.8 %	6.1 %
Total Phosphorus Pentoxide (P <sub>2</sub> O <sub>5</sub> ) soluble in neutral ammonium citrate and in water	0 %	12 %	7 %
Watersoluble P <sub>2</sub> O <sub>5</sub>	-	7.8 %	4.9 %
Total Potassium Oxide (K <sub>2</sub> O), watersoluble	0 %	17 %	17 %
Total Magnesium Oxide (MgO) Watersoluble MgO	0 % -	2 % 1.6 %	2.0 % 1.6 %
Total Sulphur (S) Watersoluble Sulphur	13 % 13 %	8 % 6.4 %	9 % 7.2 %
<u>Trace elements :</u>			
Total Boron (B)	-	0.02 %	0.02 %
Watersoluble Boron	-	0.014 %	0.014 %
Total Zinc (Zn)	-	0.01 %	0.01 %
<b>Physical properties</b>

### **APPLICATIONS**

1-3 times within the growing season. Application rates must meet the crop requirements. The nutrient content of the soil and previous cultivations must also be considered to avoid over-application. The recommendations of the official advisory service and local agronomists should be followed. Fertilisers with a nitrification inhibitor reduce the risk of nitrate leaching, allow earlier fertilisation, and reduce the amount of nitrogen. The effect of the nitrification inhibitor depends on the climate, weather and soil and may last for 4-10 weeks.
