Tags : Diarrhea, starting calves

Product ID : 5838

2. DESCRIPTION

Stop diarrhea !

The problem of diarrhea is one of the most common problems in rearing calves. In order to shorten the course of digestive disorders, it is recommended to use sorbents that bind bacteria and excess intestinal water, pre-biotics influencing the development of normal gastrointestinal microflora and substances with antioxidant properties that reduce inflammation and increase immunity.

Category: Cattle, For Veterinarians, Calf start
