Nutritional Oral Liquids

SICO ORGANISOL OS

Organic acid & amino-acid & chelated elements for oral administration

1. Composition:

Copper	14.0 mg
Zinc	25.0 mg

Organic acids : Lactic acid, formic acid and propionic acid
Essential amino acids : Threonine, methionine, tryptophan and lysine

2. Description

Solution for oral administration.

SICO ORGANISOL ORAL is a water based mixture of chelated minerals, organic and amino acids along with an energy carrier. Chelated minerals are easy to absorb by the intestines of the animals. They reduce the growth of pathogenic micro-organisms in the stomach thus boosting the immune system. Essential amino acids are the building blocks for animals and support the animal's growth. The organic acids reduce the pH in the stomach thereby making the pH unsuitable for the growth of pathogenic micro-organisms.

3. Indications:

SICO ORGANISOL ORAL is indicated for preventing diarrhoea, relief from heat stress, boosting the immune system and reducing the productivity losses in animals due to heat stress.

Contra indications

Do not use in combination with veterinary medicinal products in drinking water.

4. Side effects:

No side effects are observed if the prescribed dosage regimen is followed.

5. Dosage:

For oral administration through drinking water.

Cattle, calves, goats and sheep	: 15 - 30 ml per animal for 7 days. (Dilute 15 ml per 1.5 litre drinking water)
